The color temperature of a light source is the temperature of an ideal black-body radiator that radiates light of a color comparable to that of the light source. Color temperature is a characteristic of visible light that has important applications in lighting, photography, videography, publishing, manufacturing, astrophysics, horticulture, and other fields.

### **Color temperature - Wikipedia**

Color psychology, an extension of color analysis, is a valuable tool that is used in conjunction with the analysis of colors. In reality, the psychological connotation of a color has nothing to do with its effect upon the color of one's face or the results in the mirror.
