Composition B, colloquially "Comp B", is an explosive consisting of castable mixtures of RDX and TNT. It is used as the main explosive filling in artillery projectiles, rockets, land mines, hand grenades and various other munitions. It was also used for the explosive lenses in the first implosion-type nuclear weapons developed by the United States.. The standard proportions of ingredients (by ...

Glass Composition, Glass Types . Related sites: Glass Properties on GlobalSpec, GlassOnWeb, MatWeb, Glass Global A general overview about glass art, history, science, literature, social studies, and technology is available at the Corning Museum of Glass (view as PDF, 1.8 MB). Schott research and development summarized their physical and technical glass properties (1.5 MB).

### **Glass Composition, Glass Types - Glass Properties**

Iron oxide nanoparticles with mean diameter ranging from 7 to 20 nm were synthesized using two routes: the precipitation method in controlled atmosphere and a reduction-precipitation method under air, in some cases followed by a hydrothermal treatment. The smallest nanoparticles were obtained by the reduction-precipitation method.
