- Mendel's principles of heredity, observed through patterns of inheritance, form the basis of modern genetics. - Some alleles are neither dominant nor recessive. Many genes exist in several different forms and are therefore said to have multiple alleles. Many traits are produced by the interaction of several genes.

The sequence of nucleotides on the gene is translated into the sequence of amino acids in the specific protein encoded by the gene. Protein production is regulated and a variety of proteins can be produced from the same gene. Molecular Genetics. The genome is the complete DNA sequence of the organism's nuclear DNA.
