Download Mechanical Engineering (Conventional and Objective Type) By R.S. Khurmi, J.K. Gupta – A good guide is essential when it comes to preparing for exams that decide your fate. Thus, it is best to rely on a book that can give you an insight on a wide range of aspects related to the subject. Mechanical Engineering (Conventional and Objective Type) is an apt book for those who are looking ...

Electromagnetism is a branch of physics involving the study of the electromagnetic force, a type of physical interaction that occurs between electrically charged particles. The electromagnetic force usually exhibits electromagnetic fields such as electric fields, magnetic fields, and light, and is one of the four fundamental interactions (commonly called forces) in nature.

The paper reviews the application of deterministic-stochastic models in some areas of computational electromagnetics. Namely, in certain problems there is an uncertainty in the input data set as some properties of a system are partly or entirely unknown. Thus, a simple stochastic collocation (SC) method is used to determine relevant statistics about given responses.

The boundary element method (BEM) is a numerical computational method of solving linear partial differential equations which have been formulated as integral equations (i.e. in boundary integral form). including fluid mechanics, acoustics, electromagnetics (Method of Moments), fracture mechanics, and contact mechanics.

Probabilistic Methods of Signal and System Analysis, 3/e stresses the engineering applications of probability theory, presenting the material at a level and in a manner ideally suited to engineering students at the junior or senior level. It is also useful as a review for graduate students and practicing engineers. Thoroughly revised and updated, this third edition incorporates increased use ...

2.1. Capacitive tactile sensors. A capacitive sensor consists of two conductive plates with a dielectric material sandwiched between them. For parallel plate capacitors, capacitance can be expressed as, $C = \frac{A\epsilon_0\epsilon_r}{d}$. Where C is the capacitance, A is the overlapping area of the two plates, ϵ_0 is the permittivity of free space, ϵ_r is the relative permittivity of the dielectric material ...
