Electronic components have a wide range of failure modes. These can be classified in various ways, such as by time or cause. Failures can be caused by excess temperature, excess current or voltage, ionizing radiation, mechanical shock, stress or impact, and many other causes. In semiconductor devices, problems in the device package may cause failures due to contamination, mechanical stress of ...

Failure mode and effects analysis (FMEA) also "failure modes", plural, in many publications was one of the first highly structured, systematic techniques for failure analysis. It was developed by reliability engineers in the late 1950s to study problems that might arise from malfunctions of military systems. An FMEA is often the first step of a system reliability study.

Answer: The FIT rate increases with temperature, you should aggregate the time spent at the higher temperature. However, the total time spent at higher temperatures should be minimized as higher temperatures
