

from neuron to brain pdf

A neuron, also known as a neurone (British spelling) and nerve cell, is an electrically excitable cell that receives, processes, and transmits information through electrical and chemical signals. These signals between neurons occur via specialized connections called synapses. Neurons can connect to each other to form neural pathways, and neural circuits.

Neuron - Wikipedia

A mirror neuron is a neuron that fires both when an animal acts and when the animal observes the same action performed by another. Thus, the neuron "mirrors" the behavior of the other, as though the observer were itself acting. Such neurons have been directly observed in primate species. Birds have been shown to have imitative resonance behaviors and neurological evidence suggests the presence ...

Mirror neuron - Wikipedia

A neuron (also called neurone or nerve cell) is a cell that carries electrical impulses. Neurons are the basic units of the nervous system.. Every neuron is made of a cell body (also called a soma), dendrites and an axon. Dendrites and axons are nerve fibres. There are about 86 billion neurons in the human brain, which comprises roughly 10% of all brain cells.

A striking feature of brain energy metabolism is the tight coupling that exists between energy demand and supply (reflected by glucose and oxygen delivery from the vasculature).

Brain Energy Metabolism: Focus on Astrocyte-Neuron

What is Synesthesia? Synesthesia is a perceptual condition of mixed sensations: a stimulus in one sensory modality (e.g., hearing) involuntarily elicits a sensation/experience in another modality (e.g. vision).

The Synesthesia Battery

Brain Rules by John J. Medina is a multimedia project explaining how the brain works. It includes a book, a feature-length documentary film, and a series of interactive tutorials.

A person's experiences when using a drug reflect the functional roles of the particular neurotransmitter(s) it disrupts. Each individual neuron manufactures one or more neurotransmitters: dopamine, glutamate, serotonin, acetylcholine, and/or any of dozens of others that scientists have identified to date.
