A harmful algal bloom (HAB) are organisms that can severely lower oxygen levels in natural waters, killing marine life. Some HABs are associated with algae-produced toxins. Blooms can last from a few days to many months. After the bloom dies, the microbes which decompose the dead algae use up even more of the oxygen, which can create fish die-offs. ...

A taxonomy is a nothing more than a classification system that arranges elements within a field of science according to their relationships. As educational psychology progressed in the early 1900's, researchers sought to improve methods of teaching and learning by classifying the response and reaction to information and mapping intellectual functions.
