Lean manufacturing or lean production, often simply "lean", is a systematic method for waste minimization ("Muda") within a manufacturing system without sacrificing productivity, which can cause problems. Lean also takes into account waste created through overburden ("Muri") and waste created through unevenness in work loads ("Mura"). Working from the perspective of the client who consumes a ...

2. The fundamentals of additive manufacturing. The fundamental attributes of Additive Manufacturing technologies are presented in this section. Additional information on AM processes can be found in prior overviews , , , . AM processes fabricate parts by creating successive cross-sectional layers of an object.

The status, challenges, and future of additive

It may be surprising to learn that many engineers with great talent and a depth of experience have a hard time answering questions about the type(s) of manufacturing environments that exist in ...

Textile manufacturing is a major industry. It is based on the conversion of fiber into yarn, yarn into fabric. These are then dyed or printed, fabricated into clothes. Different types of fibers are used to produce yarn. Cotton remains the most important natural fiber, so is treated in depth. There are many variable processes available at the spinning and fabric-forming stages coupled with the ...
