NOAA/NWS Storm Prediction Center

Originates marine weather warnings, forecasts, and guidance in text and graphical format for maritime users in the northern waters of the Atlantic and Pacific. OPC continually monitors and analyzes maritime data, and provides guidance of marine atmospheric variables for purposes of protection of life and property, safety at sea, and enhancement of economic opportunity.

About Wind Energy - The Facts . Wind Energy - The Facts (WindFacts) was a European project financed by the Intelligent Energy - Europe programme of the Executive Agency for Competitiveness and Innovation that ran from November 2007 to October 2009.

wind-energy-the-facts.org - Home / About the project

Numerical weather prediction (NWP) uses mathematical models of the atmosphere and oceans to predict the weather based on current weather conditions. Though first attempted in the 1920s, it was not until the advent of computer simulation in the 1950s that numerical weather predictions produced realistic results. A number of global and regional forecast models are run in different countries ...

Wind is the flow of gases on a large scale. On the surface of the Earth, wind consists of the bulk movement of air. In outer space, solar wind is the movement of gases or charged particles from the Sun through space, while planetary wind is the outgassing of light chemical elements from a planet's atmosphere into space. Winds are commonly classified by their spatial scale, their speed, the ...
