ABSTRACT. Hypotheses as to the position of restinga formations are many, the most widespread being the salinity gradient and soil fertility. In order to elucidate these questions, soil properties of the creeping psammophyte (CPF) and Palmae formations (PF) as well as leaf chemistry of *C. rosea* (Sw.) DC. restricted to the former and *P. mucronata* Lam. in the latter were analyzed.

Welcome . The Organising Committee cordially invites you to participate in the 29 th International Carbohydrate Symposium in 2018 (ICS 2018), to be held from the 15 th to the 19 th of July at Faculdade de Ciências, Universidade de Lisboa (FCUL). In the morning of the 15 th of July, the Young Researcher Workshop and the Glycoinformatics Masterclass will take place at FCUL, both sponsored by ...

A projeção de Fischer, idealizada por Hermann Emil Fischer em 1891, [1] é um representante bidimensional de uma molécula orgânica tridimensional por projeção. Projeções de Fischer foram originalmente propostas para a descrição de carboidratos e utilizados por químicos, particularmente em química orgânica e bioquímica. O uso de projeções de Fischer em moléculas que não sejam ...

Nitrato de prata é um composto químico de fórmula molecular  $AgNO_3$ . Comercialmente, costuma chamar-se também de "cáustico lunar", [6] ainda que para uso como reagente analítico em grau de pureza de 99,8% ponderal. Em medicina já foi usado como cauterizador para eliminar o de ligeiras tumores epidérmicas (verrugas e outros), e costumava chamar-se, por isso, de "pedra infernal". [7]
