Oil shale is an organic-rich fine-grained sedimentary rock containing kerogen (a solid mixture of organic chemical compounds) from which liquid hydrocarbons can be produced, called shale oil (not to be confused with tight oilâ€”crude oil occurring naturally in shales). Shale oil is a substitute for conventional crude oil; however, extracting shale oil from oil shale is more costly than the ...

Hydraulic fracturing (also fracking, fraccing, frac'ing, hydrofracturing or hydrofracking) is a well stimulation technique in which rock is fractured by a pressurized liquid. The process involves the high-pressure injection of 'fracking fluid' (primarily water, containing sand or other proppants suspended with the aid of thickening agents) into a wellbore to create cracks in the deep-rock ...

### **Chapter III - GEOTECHNICAL ENGINEERING**

As the delta-V for a mission goes up, the amount of propellant required goes up exponentially (or looking at it another way: the amount of payload shrinks exponentially). Large amounts of propellant are expensive, but the higher the mass-ratio the higher the likelihood that the spacecraft will not be reusable.

Executive Summary. Canada's Energy Future 2016: Energy Supply and Demand Projections to 2040 (EF 2016) is a continuation of the National Energy Board's (NEB) Energy Futures series. The Board released the last full report, Canada's Energy Future 2013 (EF 2013), in November 2013. In developing EF 2016, the NEB met with various energy experts and interested stakeholders, including ...
