Gender statistics inform policy and programme decisions, and are critical for effective monitoring and analyses of gender gains and gaps. Yet, eighteen years after the Beijing Declaration and Platform for Action (BPFA) clearly laid out twelve priority areas that highlighted the importance of making available data on women and men, the need and demand for gender statistics continue to grow and ...

Box and Cox (1964) developed the transformation. Estimation of any Box-Cox parameters is by maximum likelihood. Box and Cox (1964) offered an example in which the data had the form of survival times but the underlying biological structure was of hazard rates, and the transformation identified this.

Multivariate statistics is a subdivision of statistics encompassing the simultaneous observation and analysis of more than one outcome variable. The application of multivariate statistics is multivariate analysis.. Multivariate statistics concerns understanding the different aims and background of each of the different forms of multivariate analysis, and how they relate to each other.

The National Survey of Family Growth (NSFG) gathers information on family life, marriage and divorce, pregnancy, infertility, use of contraception, and men's and women's health. The survey results are used by the U.S. Department of Health and Human Services and others to plan health services and ...

NSFG - National Survey of Family Growth Homepage

Definition 1: The covariance between two sample random variables x and y is a measure of the linear association between the two variables, and is defined by the formula. Observation: The covariance is similar to the variance, except that the covariance is defined for two variables (x and y above) whereas the variance is defined for only one variable. In fact, $\text{cov}(x, x) = \text{var}(x)$.
